WORK EXPERIENCE

SDE Intern - Zemer Delhi, Remote

Dec 2025 - Feb 2026

- Developed reusable UI components used across multiple features, improving development speed and consistency.
- Improved frontend features and user experience across different parts of the application using React.js, Zustand, and Framer Motion.
- Worked in an iterative development cycle, contributing to feature development, testing, and refinement

EDUCATION

Maharaja Agrasen Institute of Technology, Delhi

B.Tech in Electronics & Communication Engineering

CGPA: 8/10

2022-2026

PROJECTS

Folio — RAG-Powered Knowledge Library: [[Github](#)][[Website](#)]

- Built a full-stack **RAG (Retrieval-Augmented Generation)** system that ingests articles, YouTube transcripts, PDFs, and plain text into a **semantic vector store** and enables **AI-powered Q&A** over saved content.
- Engineered multi-stage ingestion using **LangChain** orchestration, **HuggingFace open-source embedding models**, and **Pinecone vector storage** with per-user namespace isolation, bookmark-level metadata filtering, and **topK=5 similarity retrieval**.
- Powered Q&A responses via **Groq's ultra-low latency LLM inference**, delivering grounded, **context-aware answers** over user-saved content with sub-second generation speeds.

Paperless - Block-Based Rich Text Editor: [[Github](#)][[Website](#)]

React, TypeScript, Express.js, MongoDB, JWT, BlockNote, Groq API, Calendar Library, Zustand

- Built a **block-based document editor** using React and BlockNote enabling structured rich-text editing with modular content blocks and a distraction-free writing interface
- Integrated an **AI chat assistant powered by Groq API** allowing users to interact with an LLM directly inside the workspace for content generation and contextual help.
- Implemented a **task planning calendar module** for tracking tasks and scheduling activities, creating an integrated productivity workspace within the editor.

NetflixGPT - AI Movie Discovery Platform: [[Github](#)][[Website](#)]

React, Firebase, TMDB API, Groq LLM

- Built an **AI-powered movie discovery platform** using React that allows users to search and explore movies using natural language prompts like genre-based queries (e.g., horror, comedy).
- Integrated **TMDB API to fetch extensive movie data**, including titles, posters, ratings, cast details, and complete movie information pages.
- Implemented **LLM-powered recommendations using Groq API** and Firebase authentication for secure user access and personalized movie exploration

SKILLS

- | | |
|---------------------------------------|--|
| • Languages & Frameworks | : Javascript(ES6+) , Typescript, Python , C++,OOP HTML5, CSS3 |
| • Frontend | : React.js ,Next.js, Redux , Zustand , TailwindCSS , ShadCN UI , Framer Motion |
| • Backend | : Node.js , Express.js , fastAPI, RESTful APIs |
| • Generative AI & LLMs | : RAG Architecture, LangChain, Groq API, Prompt Engineering, OpenAI API |
| • Database & Vector Stores | : Pinecone, Qdrant ,MongoDB , PostgreSQL , Firebase |
| • DevOps & tools | : Postman , Prisma ORM , Vercel, docker |

ACHIEVEMENTS

Problem Solving: Solved 100+ Data structures and Algorithms problems across different platforms in C++ including [[LeetCode](#)]
