Hiring Team Accuris Bengaluru, India

Dear Hiring Team,

I am writing to apply for the Associate Software Engineer position at Accuris. When I came across this role, it felt like something I genuinely wanted to be a part of, not just because of the job itself but because of what Accuris is building and why it matters.

I recently completed my B.Tech in Computer Science and have spent a good chunk of the past year teaching myself backend development. Most recently I have been working with FastAPI and Python, building web APIs from scratch and learning how to structure real projects properly. Things like clean architecture, database design with SQLAlchemy, authentication flows, and making sure code is maintainable down the line. It has been self-driven learning and I have enjoyed every bit of it.

Python is where I feel most comfortable right now, which lines up well with what you are looking for. I have also been reading and experimenting around machine learning concepts on the side, so the AI and data side of Accuris genuinely interests me.

What draws me to this role specifically is the two-year commitment aspect. I am not looking to hop around. I want to join a team, get deep into the work, understand the products properly, and grow from there. Accuris has been part of the engineering world for over 60 years and is now moving like a startup. That combination sounds like a great place to actually learn.

I am a quick learner, I am comfortable asking questions when I do not know something, and I work well in teams. I would love the chance to contribute and grow with Accuris.

Thank you for taking the time to read this. I hope to hear from you.

Warm regards, Shivam
